

DRIVE BETTER DECISION MAKING WITH INSIGHTS.

See your business differently with new Turnkey Insights® software.

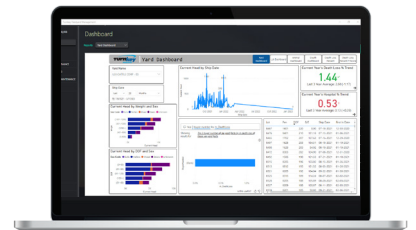

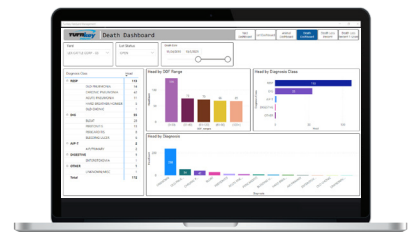

Many variables can impact a feedyard's profitability. Insights, a new platform by Turnkey Computer Systems LLC and Animal Health International, is a customizable, easy-to-use analytics tool to help you organize data and optimize your business. It connects operational and financial data to give you a new level of knowledge about your business.

Insights works by pulling data into a dashboard to help you better understand your profitability. Using Insights can help you maximize your business's potential by answering questions about key areas of your operation.

- *Yard data:* Is the hospital pen percentage higher or lower than average?
- *Lot performance:* How does a lot's performance compare to others with similar characteristics?
- *Cattle health:* Which treatments did each animal receive?
- *Death loss:* Was a high death loss preceded by a weather event?

Our experienced customer service and technician teams will handle the installation and provide in-depth training so you can efficiently use Insights to its fullest capability. Insights is accessible by desktop or mobile device.
